

VEIT 8660 — Industrial Tunnel Finisher

Engineered for automotive and furniture interiors to remove wrinkles and stabilize dimensions across fabrics and leather—delivering a consistent, high-quality finish. Operates standalone or integrated into existing lines.

Key Features

- Uniform, high-quality finishing for interior parts, fabrics, and surfaces.
- Wrinkle removal with dimensional stabilization for reliable fit and appearance.
- Specially designed airflow and heat distribution for consistent results.
- Robust build for high reliability and long service life.
- Ergonomic access for easy loading/unloading and maintenance.

Applications & Materials

- Automotive and furniture interior components.

- Suitable for a wide range of fabrics and leather upholstery.
- Used wherever wrinkle removal and dimensional stability are required.

Flexible Integration

- Can be installed as a standalone system or integrated into production lines.
- Adaptable to different manufacturing layouts and throughput requirements.

Backed by the VEIT Group's decades of expertise in textile finishing, ironing, and pressing, the 8660 sets an industry standard for quality and reliability.
